Course title	Applied Data Science Spring 2023										
Course number	0907761										
Credit hours (lecture and lab)	3 (3 + 0)										
ECTS (weekly contact and self-study load)	6 (3 + 3)										
Prerequisites/co-requisites by course number and name	Applied machine learning, 0907743										
Prerequisites by topic (other than the formal prerequisites above)	Students are assumed to have good background in mathematics, particularly, calculus, linear algebra, and statistics. Additionally, the students should have good programming skills using Python.										
Level and type (compulsory, elective)	Masters' elective course										
Year of study and semester	Second year, first semester										
Catalogue description	Definitions and applications; Market trends; Data analytics lifecycle; Data exploration and preprocessing; Data visualization; Theory, tools and methods; Introduction to Big data management, warehousing and processing. This course has practical assignments and term project.										
Objectives	<ol style="list-style-type: none"> 1. Introduce students to the practical techniques used in data analytics including loading, cleaning, preparation, wrangling, visualization, and analysis. 2. Introduce students to the basic concepts and techniques in big data. 										
Intended learning outcomes	<p>Upon successful completion of this course, students will be able to:</p> <table border="1"> <thead> <tr> <th>No</th> <th>Intended learning Outcome (ILO)</th> <th>Program learning outcome (PLO)*</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Use Python and its specialized libraries to gain insight from data and solve problems.</td> <td>3</td> </tr> <tr> <td>2</td> <td>Know the main concepts and techniques used in handling big data and performing data analytics.</td> <td>1</td> </tr> </tbody> </table> <p>(*) The PLOs are listed in the appendix</p>		No	Intended learning Outcome (ILO)	Program learning outcome (PLO)*	1	Use Python and its specialized libraries to gain insight from data and solve problems.	3	2	Know the main concepts and techniques used in handling big data and performing data analytics.	1

Teaching and learning methods	<p>Development of ILOs is promoted through the following teaching and learning methods:</p> <ul style="list-style-type: none"> • Lectures will be in class. • The AI lab is open for the students to practice the practical aspects and solve the programming homework assignments. • The student attends the class presentations and participates in the discussions. 										

	<ul style="list-style-type: none"> • The student joins the related online team/group and participates in its discussions. • The student studies the reference material, including books and videos. • The student solves the programming assignments in data science. • The student carries out a term project for solving a problem using data science techniques. • The student develops a professional report for the term report. • The student presents the term project in class. 																																																				
Learning material type	Textbook, class handouts, some instructor keynotes, selected YouTube videos, and access to a personal computer and the internet.																																																				
Resources and references	<p>A- Required book(s), assigned reading and audio-visuals:</p> <ol style="list-style-type: none"> 1. Learning Outcomes for the MSc in Artificial Intelligence and Robotics

Students who successfully complete the MSc in Artificial Intelligence and Robotics (AIR) will be able to:

1. Demonstrate a sound understanding of the main areas of AIR including artificial neural networks, machine learning, data science, industrial and service robots, and intelligent and autonomous robots.
2. Apply a critical understanding of essential concepts, principles and practices of AIR, and critically evaluate tools, techniques and results using structured arguments based on subject knowledge.
3. Apply the methods and techniques of the AIR fields in the design, analysis and deployment of AIR solutions and solving practical problems.
4. Demonstrate the ability to produce a substantial piece of research work from problem inception to implementation, documentation and presentation.
5. Demonstrate life-long learning, independent self-learning and continuous professional development skills in the AIR fields.
6. Demonstrate a sound understanding of the ethical, safety and social impact issues of AIR solutions and products.
